

An inquiry into Google Search
See text below

www.DamnCourthouseCriminals.com
www.OpenJustice.US

exactly as into Google,
i.e. as phrase

shows up as no.1 on 1st page

These are ALL images
from my websites, some
inquiries, just as this
page, various text or
phrases.

This was an experiment – upon the Google search engine itself – where I had only HALF A DAY earlier – added a LINK on my www.DamnCourthouseCriminals.com.

Actually, the FULL name of my link was [Judge Zimmermann FORBIDS me - from showing the JURY](#) – with some plain text following.

NOTE: “this” link, at my NOW “WORD stage” of creating this document WILL function (with <CTRL> <CLICK>). At the final stage of this document, as a PDF it will NOT.

But what I find so interesting, is that upon even so SHORT a “snip” of the words of my link – is that Google can FIND IT – even present the FULL NAME of my link – even the words AFTER it – and have actually FOUND this seemingly insignificant link – AND SO FAST!

So what goes? I believe it is the QUOTES in the search – that set Google into a completely different MODE – a mode where it keeps up somewhat continuously with ALL OF THE TEXT – on the “landing page” – of certain sites – and certain sites ONLY.

And in the case of THIS site, it is certain “key subject matter” words that make Google select from my “stuff” – words like judge, judicial, court, criminal, civil, recusal, sanction, and particularly the NAMES of actual judges, attorneys, courts of appeal, etc – as an example things like “petition for writ of certiorari”, “writ of execution”, “writ of mandamus”, etc. NOT a complete answer, but a little bit of INFO.

This document prepared as follows: 1. Google search 2. Windows "snipit tool" into a JPEG 3. Place JPEG into WORD 4. Add text in WORD 5. "print" out of WORD into "Adobe Printer" or CutePDF into a PDF 6. "mark up" via Adobe Acrobat "text boxes" 7. Via Expression Web 4 (MS free version) into web 8. Upload via FileZilla
